

Pin Power!

American DJ Unveils Compact White Pinspot With Powerful LED Technology

American DJ has taken a DJ/club/display lighting standard – the white pinspot – and propelled it into the 21st century with LED lighting technology. The company's new, compact **Pinspot LED** is powered by a bright, clear 3W LED that has the brightness and output of a 30W halogen bulb, but uses considerably less energy and generates virtually no heat. Plus, the Pinspot LED's 50,000-hour lamp nearly eliminates the need for replacement bulbs.

With its powerful, bright, focused beam, the Pinspot LED is great for a variety of lighting applications, from highlighting objects and framing displays, to creating club lighting effects. It can be shined on a wedding cake or projected onto a mirrorball at a dance club for eye-popping effects. It can also be used to create dramatic mood lighting on a restaurant table, or to spotlight displays at a retail store. Its small size also makes it great for use in multiples. "Wow! If I throw two of these from different directions on a wedding cake, I'll make a great impression," said one veteran DJ, when he first saw the Pinspot LED at a trade show.

- Bright 3W white LED Pinspot with 12-degree beam angle
- Very low heat output and power consumption
- Includes hanging bracket
- 6-degree beam angle lens also included
- Switchable power supply: 90 - 240V, 50Hz/60Hz
